Spirit and truth Nursery Alert will allow you to send messages to your congregation and not interrupt the service flow.

This Software can be used as an addition to ZionWorx v2.0 available from <http://www.zionworx.org.uk>

This software is designed to be stand alone and can also be used without ZionWorx v2.0 Running.

If You have any issues with the software you should use the ZionWorx Support forums or email the Author directly.

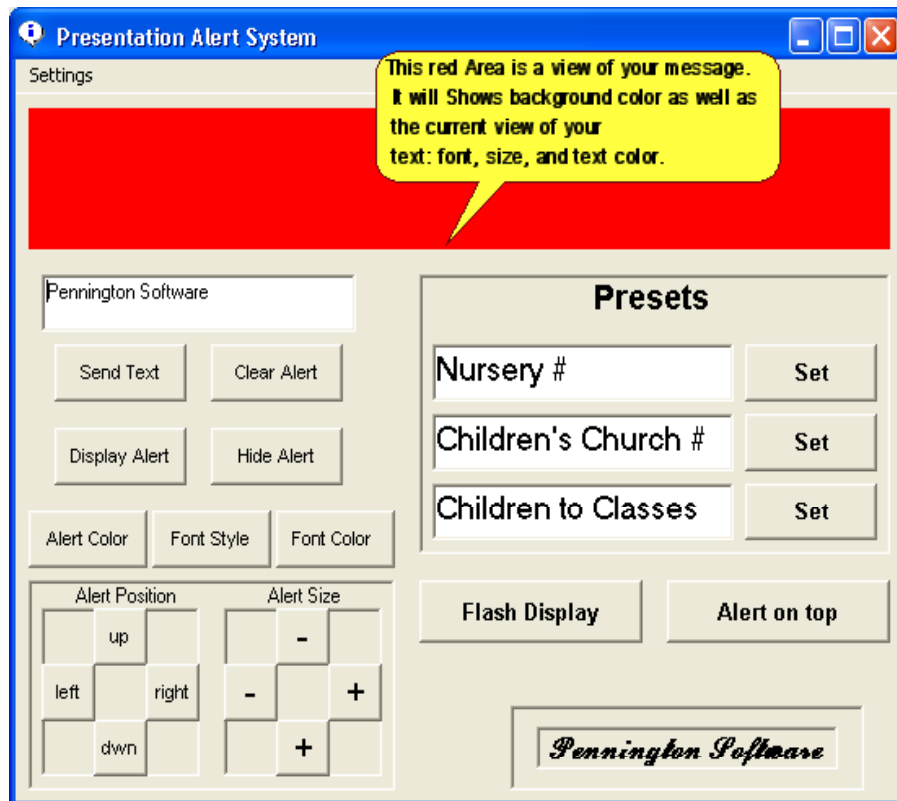

ZionWorx does not support this software directly only by offering a support forum for users who need help.

### Software Installation

If Package downloaded please unzip to a directory of your choice then run Setup.exe

Once you have completed setup you can run straight away no system reboot needed.

### Screen Shot

### Send Text Button

Click here to send the text you type in the box above this button to the alert.

### Clear alert Button

Click here to clear displayed text.

### Display Alert

Click to show alert.

### Hide alert

Click to hide alert from view.

### Background

Click to change the color of the displayed alert changes apply after send.

### Font

Click to resize and choose font for display. Changes are displayed after send.

### Font Color

Click to choose Font Color. Change occurs after send.

### Alert Position

Alert can be positioned with the mouse by click and drag. Or click on up down left or right to move it. Also when the move buttons are selected if you hold enter key down alert will move fluidly this can make a nice enter effect and exit as well.

Alert will first pop up in the initial position just above the alert control panel. Use the mouse to drag it to the location you want it to be displayed on your projection monitor screen. Then save this position see save below.

Every time you start Nursery Alert, The position will be in default (just above the control panel) during service load in the preset you saved to set it without showing movement to the congregation. Also see alert position controls below.

### Alert Size

Click on these buttons to change size of alert to fit size needed for message length and font size.

### Presets

Click on the preset box to set message to send to preset clicked

Click on preset set to change preset to text typed in the send box

Save presets by clicking settings and then on presets and then on Save

Load presets by clicking settings and then on presets and then on Load

### Flash Button

Click here to make alert text flash

Click again to turn flashing off

### Alert on top

If PowerPoint or another program covers alert click on Alert on top to bring it to the front of display

### Save Alert Position

To save alert position click settings Display Position then click save Position this can then be loaded later to bring alert to desired position with having to use mouse.

### Load Alert Position

To load alert position click settings Display Position then click load position.

To keep alert from appearing in a bad spot alert always resets to default position when alert program is started, therefore check alert load position during set-up prior to service.
